About HollandPTC

The Holland Proton Therapy Center (HollandPTC), founded by Erasmus Medical Centre, Leiden University Medical Centre and TU Delft, is an active partnership between these organizations in which they collaborate in the fields of healthcare, education, and groundbreaking research. The Center has also established partnerships with other national and international proton centers.

HollandPTC is an independent outpatient clinic and research centre, located in Delft. The center has two proton gantries with in-room CT imaging, a treatment room for the irradiation of eye tumors, and a bunker with a proton bundle for research. In addition, the center has modern imaging equipment, including a dual-energy CT, a 3T MRI, and a PET/CT.

HollandPTC's mission is to provide patients with the best proton therapy presently available, in a safe and welcoming environment, where they are treated with care and diligence. In addition, we have a comprehensive R&D program together with our founding parties. Our mission is to prove the added value of proton therapy, which we do in cooperation with the national and international radiotherapy and oncology community. Our ambition is to become a leading institute for therapy and scientific research. Our core values are: caring & thorough, uniting & dynamic, professional & innovative.

The department of Medical Physics & Informatics

As medical physicist you are member of the department of Medical Physics & Informatics and report to the Head of Medical Physics & Informatics. At present, the department has room for seven medical physicists, and has an additional staff of about nine, including project physicists, medical physics engineers, and an IT professional.

Job description

As a clinical physicist you are closely involved in the treatment of patients and you are responsible for the quality and safety of medical equipment. You also have a leading role in the introduction of new techniques in clinical practice. You work together with colleagues from various disciplines in various multidisciplinary clinical and research groups. Our spearheads are the development and implementation of advanced treatment planning for proton therapy and image-guided and (online)-adaptive proton therapy. One of your focus areas will be treatment planning. A combination of the tasks described with scientific research is possible.

What we look for?

We are looking for a proactive and result-oriented professional with a flexible attitude that works well in a team and project-based way. You preferably have experience with proton therapy and state-of-the-art treatment planning. You have the ambition to work at the forefront of the development of proton therapy in the Netherlands and globally. You have a registration as a medical physicist in the field of radiotherapy, or a recognized registration as a medical physicist in another country that can lead to registration in the Netherlands. You are proficient in Dutch (or are willing to learn the language) and English. We also invite candidates who will soon complete the training for medical physicists to respond.

Being able to submit a Certificate of Conduct is a condition for the appointment.

Terms of employment

Your contract will be for 36 hours a week, for a definite period of 1 year with option for an indefinite period after 1 year. The Collective Labor Agreement for Dutch University Medical Centers (CAO UMC) applies; depending on education, qualifications, record and experience, the maximum salary is € 6,665,- (scale 14), plus 8% holiday allowance and 8.3% end-of-year bonus. We provide a commuting allowance and, if applicable, a moving allowance. You will have access to a personal accreditation budget. The starting date will be agreed with the successful candidate, but can be at short notice or sometime in the next few months.

If you are not a Dutch national and start work in the Netherlands, you may be eligible for a tax break, which means that 30% of your wage is paid tax-free.

We are offering full-time employment in an intellectually challenging environment.

Application

For more information about this position, please contact prof. dr. Mischa Hoogeman. Head of Medical Physics & Informatics by telephone at +31 (0)6-24851534 or by email; m.hoogeman@hollandptc.nl or contact dr. Petra Trnkova, Medical Physicist, by telephone via the HollandPTC secretarial office at +31 (0)88501800 or by email; p.trnkova@hollandptc.nl.

Please send your CV and cover letter before June 1st 2018 to HollandPTC via HR@hollandptc.nl, stating "vacancy Medical Physicist".

Interviews (in-real or via Skype) will be held in week 25/26.

Acquisition to this vacancy is not appreciated. •
